

Mixed-Phase/Glaciated Icing Technology Plan of IPHWG/EHWG

Four primary research tasks are identified:

Task 1. Instrumentation development and evaluation for high ice water content

Task 2. Flight test research for characterization of high ice water content environments.

Task 3. Experimental testing in support of ice accretion model development and validation for high ice water content environments.

Task 4. Test Facilities Requirements for demonstrating engine compliance with Appendix D requirements.

Notes: Detailed plan available from FAA. Industry Workshop planned for late March on Tasks 3 and 4.
